APIs Specification Document for Integration of States/UTs RCS Application with National Cooperative Database (NCD)

A. Purpose of the Document:

This document has been prepared to help all the States/UTs RCS offices to build their Digital Platform for all their activities in such a manner that it is possible to integrate their Database with National Cooperative Database(NCD) through APIs. The structure of the NCD along with all the Master Data tables has been given. States/UTs RCS may use the same Master Tables in the new RCS application which is to be developed under the RCS Computerization Project of MoC. This document shall also help those states/UTs (who are already having their existing RCS Application) in making changes to their system, so that Data updation in NCD is done through APIs automatically.

All the States/UTs are requested to capture all the parameters (besides others as per your state requirement)as given below in order to update the NCD through APIs.

The attached Excel file with this document contains all the Master Tables structures being used in the NCD. This will help the State in developing their State/UT specific RCS Application and its integration with NCD.
